

ABSTRACT

There is provided an automatic guide apparatus for traffic facilities capable of automatically recognizing the circumstances
5 around the traffic facilities for motor vehicles or the like which change momentarily to automatically guide the operating route of the road or the like. In the automatic guide apparatus for traffic facilities 1, image data, voice data or the like in connection with the circumstances around the traffic facilities to be operated obtained by
10 the input device 2 are compared with image data, voice data or the like stored in advance in a database by the comparison device 4. Where the results obtained by comparing the image data, voice data or the like are coincided, the contents of the data are recognized by the recognition device 5, and the recognized results are informed to
15 an operator or the like in a letter or character, an image, a voice or the like by the output device 6.
